Camdata exhibits at the 2014 Future of Wireless International Conference

Wireless communications has arguably already changed the world more than any other human invention. The conference examined the business opportunities and the wider societal benefits possible through wireless technologies [read more...]

How the M2M world and the Internet of Things is evolving

With the number of networked connections increasing by 30% per year, are we any clearer on what the world according to the Internet of Things actually is and means? Simon Jones explores how the connected world is evolving [read more...]

How the Linux and Android ecosystem is still ambling, but will storm into all aspects of industry

From cookers to cars, watches to washing machines, Linux and Android are increasingly prevalent throughout our lives. Our founder discusses their history and where they may go next as they continue their march into a huge range of industrial and consumer sectors [read more...]

Camdata has expertise across sensing, monitoring, micro-processing and control, embedded software, RFID, device management and operator interfaces. Contact us if you have a product idea, a design brief or an obsolete product that needs replacing. For more information visit our website or that of our specialist sites Traffic signal terminals, Microscribe, MeLock or RFIDCam.
